

EverGreen® Pro 60-6

Multi-Purpose Botanical Insecticide

EVERGREEN® PRO 60-6

Perfect for Insect Control in Greenhouse, Nurseries and Landscape Maintenance

EverGreen® Pro 60-6 is a botanically-derived pyrethrum insecticide that offers immediate insect control for greenhouse and nursery production as well as landscape maintenance. EverGreen Pro 60-6 is a broad-spectrum contact insecticide that delivers rapid knockdown and kill of a wide range of insects by flushing them from hiding. The synergist PBO has been added to increase its overall effectiveness. EverGreen Pro 60-6 can be used both in pre-harvest and post-harvest applications.

EverGreen® Pro 60-6 Features

- **Botanically-derived multi-purpose insecticide**
- **Rapid knock down and kill of over 100 insects**
- **For use on growing crops, ornamentals and stored products**
- **Kills fruit flies on harvest fruits and vegetables**
- **Used alone as clean up spray or as pre-harvest spray**
- **Available in three sizes: pint, quart and gallon**

Tips for best use

- Final spray mix must be buffered to a pH of 5.5-7.0.
- EverGreen® Pro 60-6 is compatible with many pesticides. Always test an unfamiliar tank mix on a small scale before widespread use
- Nonselective – Apply product when bees and beneficial insects are less active
- Allow spray to dry before allowing adults, children or pets in treated areas
- Do not wet plants to the point of runoff or drip
- Do not apply more than ten times per season
- Do not reapply within three days except under extreme pest pressure
- In case of extreme pest pressure, do not reapply within 24 hours
- Not for indoor use except in greenhouses
- Avoid exposure to UV light, especially from sunlight. Store in darkness and temperatures below 80° is ideal
- Please refer to label for complete applying instructions and safety information
- EverGreen® Pro 60-6 foliar spray rates are 12 - 24 fluid ounces per 100 gallons. Apply diluted product at the rate of 3 gallons/1,000 sq. ft. MOA 3A. 12 hr. REI.

EverGreen® Pro 60-6 – for rapid knock down and kill of insects in greenhouse, nursery and landscape maintenance applications.
